

Seeing Sound

Seeing Sound mixes science, technology, art, and interactivity. We conduct science experiments where children can see sound and interact with it.

Seeing Sound involves

1. making slime
2. making the slime dance using a loudspeaker
3. making sand pictures using vibration
4. we play a tone game called "Louder/Softer"

Seeing Sound takes children from ecstasy to awe! It also demonstrates the unbreakable link between movement and sound and is guaranteed to surprise!!
