

# The SONiC Kitchen

## Seeing Sound

**Seeing Sound** mixes science, technology, art, and interactivity. We conduct science experiments where children can see sound and interact with it.

### Seeing Sound involves

1. a discussion about vibration
2. making slime (oobleck)
3. making the slime dance using loudspeakers
4. making sand pictures using a Chladni plate and iPads

**Seeing Sound** takes children from ecstasy to awe! It also demonstrates the unbreakable link between movement and sound and is guaranteed to surprise!!
